

SCA 1203SA

FIRE FIGHTING SUIT

Functions / Features

Material Construction

Outer shell Aramid

Middle layer Aramid / PTFE Film

Lining Aramid / Pelt

Moisture Barrier

Made of a high-quality PTFE film, it is designed to provide exceptional waterproof performance without compromising breathability. This interlining effectively blocks out moisture, keeping you dry and comfortable throughout extended periods of work.

Replaceable Suspenders

Designed to be easily replaceable, allowing for convenient washing or repair. Made from elastic material, they provide comfortable movement and reduce fatigue caused by the weight of the pants.

Separable Inner & Outer Garments

The outer garment provides essential protection against heat, flames, and external hazards while inner garment has moisture-wicking properties. For complete intended protection, both garments should be worn together.

Contoured Collar

The collar is thoughtfully contoured around the neck, ensuring wearer comfort while providing complete thermal and moisture protection.

Adjustable Ankle Hem

The ankle hem is designed to be size-adjustable, offering flexibility to the user. It features a zipper that allows for easy width customization, enabling firefighters to widen or narrow the hem according to their individual comfort and requirements.

Extended Wristlets

The wristlets are designed to provide extended protection by covering up to the back of the hand. They incorporate a thumb loop for enhanced comfort, allowing for a secure and ergonomic fit.

Ergonomic Design

The suit is meticulously crafted with ergonomic design prioritizing the user's comfort and freedom of movement. It ensures firefighters can perform their tasks with ease and agility even in demanding environments.
