

DIRECT COOLING

SEESAW

Fire Extinguishing Lance for EV Batteries

Applies the lever principle to the battery vehicle for fire suppression. By puncturing the battery section of a fire-involved vehicle and injecting fire-extinguishing water, the battery pack can be directly sprayed and cooled simultaneously.

- Parts can be replaced for sustainability
- Applicable to regular and SUV vehicles
- Quick installation: within 30 seconds
- Direct spraying and cooling inside the battery pack

How to Use SEESAW

1. Attach the nozzle tip

2. Connect the fire hose

3. Adjust to the vehicle's height

4. Place under the vehicle's battery pack

5. Penetrate with a hammer
